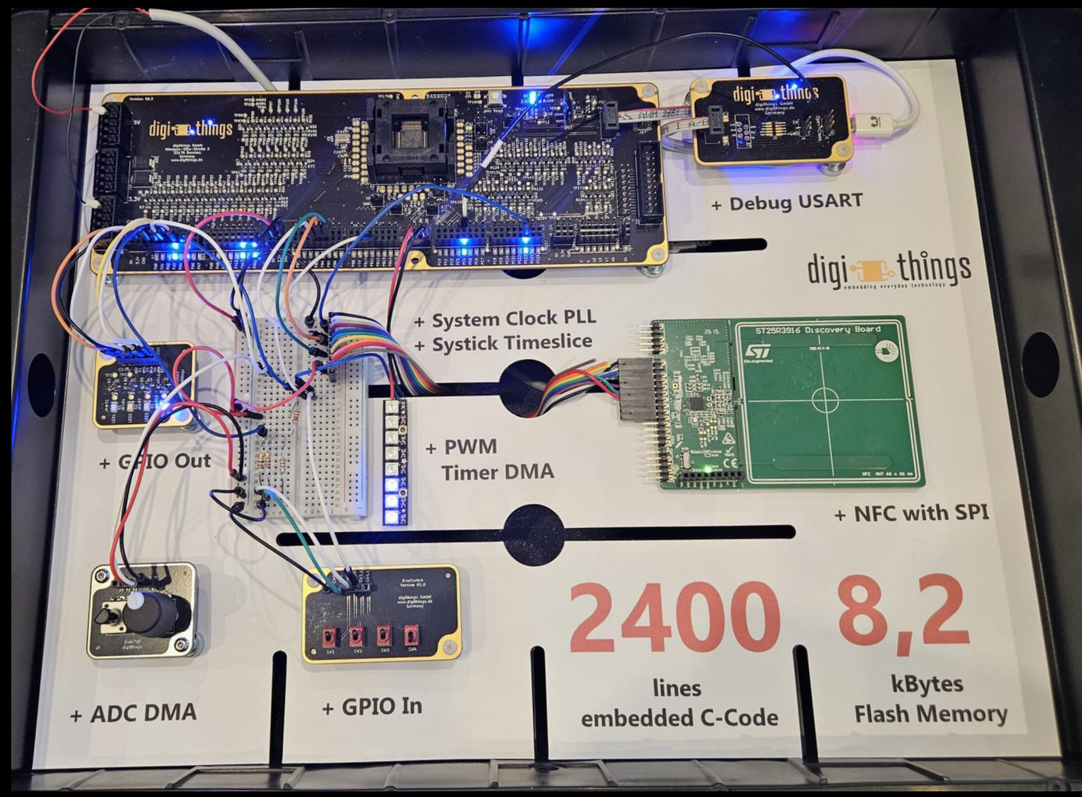
TUTORIAL

Installation of the development environment

Author: Dipl.-Ing. Thomas Lachtrup
Email: thomas.lachtrup@digithings.de

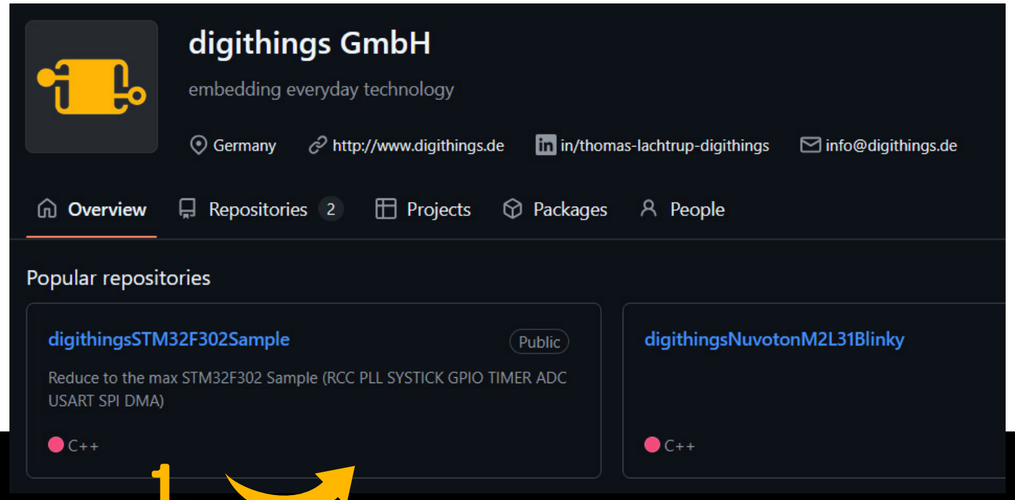
Requierements

- Eclipse C/C++ Development
- Eclipse Plugin OpenOCD Debugging
- Importing a project
- STM32 Nucleo Board
- For simulation: Microsoft VisualStudio



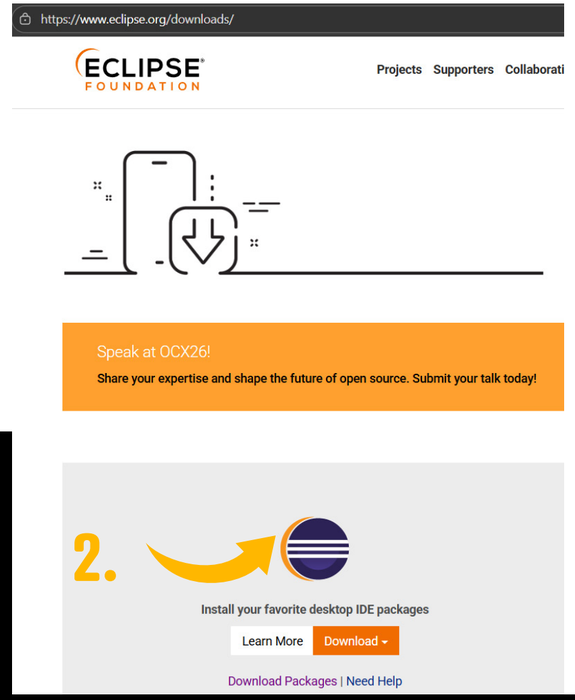
Download project from github.com/digithings-GmbH

Select STM32 or Nuvoton.



Install Eclipse.

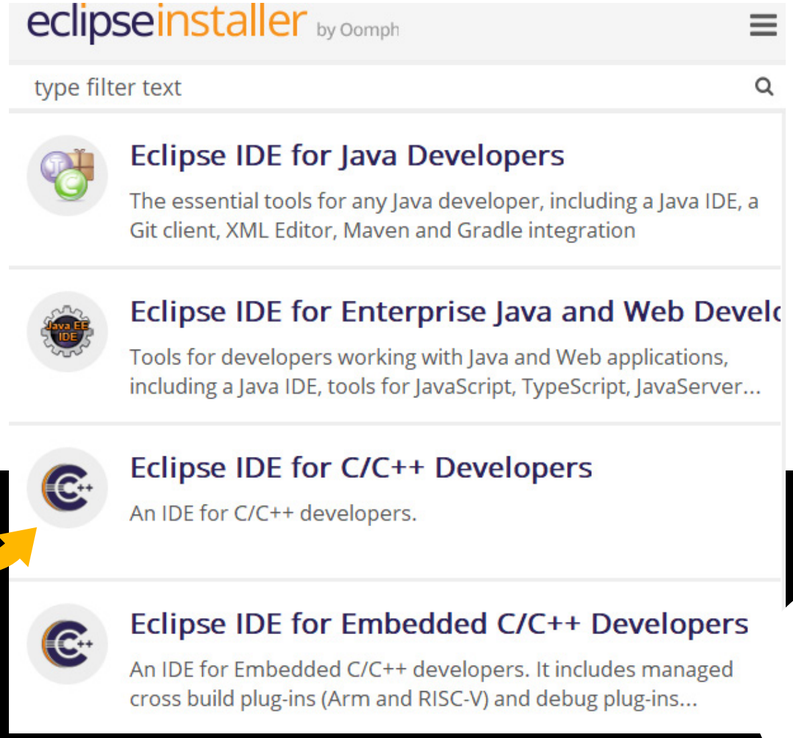
Get Eclipse: Eclipse Downloads | The Eclipse Foundation



An installer will then be downloaded.

Open the eclipse-inst-jre-win64.exe file.

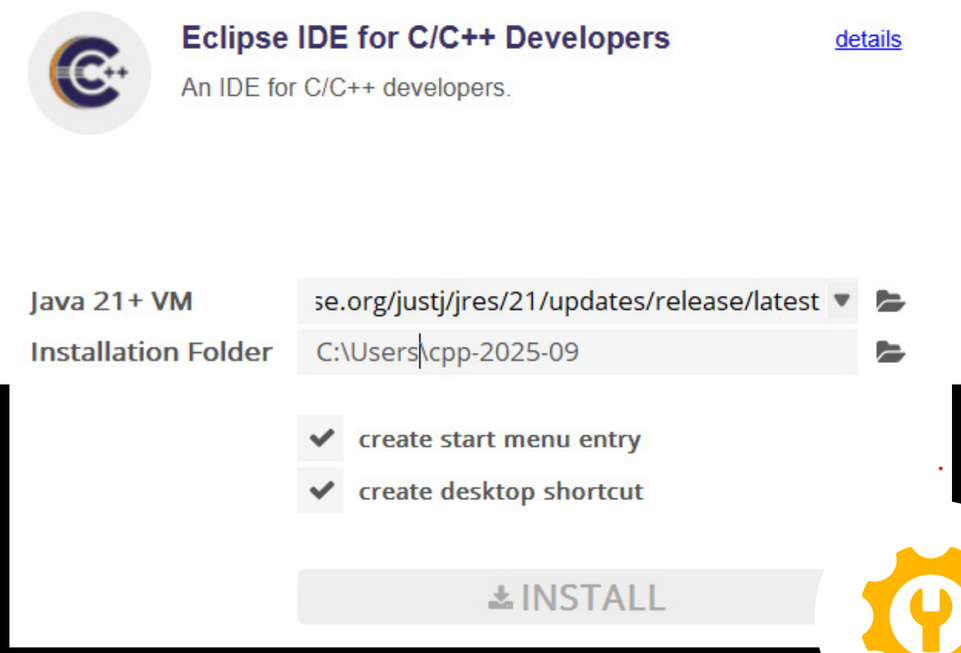
Select Eclipse IDE for C/C++ Developers.



4.

Select Eclipse IDE for C/C++ Developers.

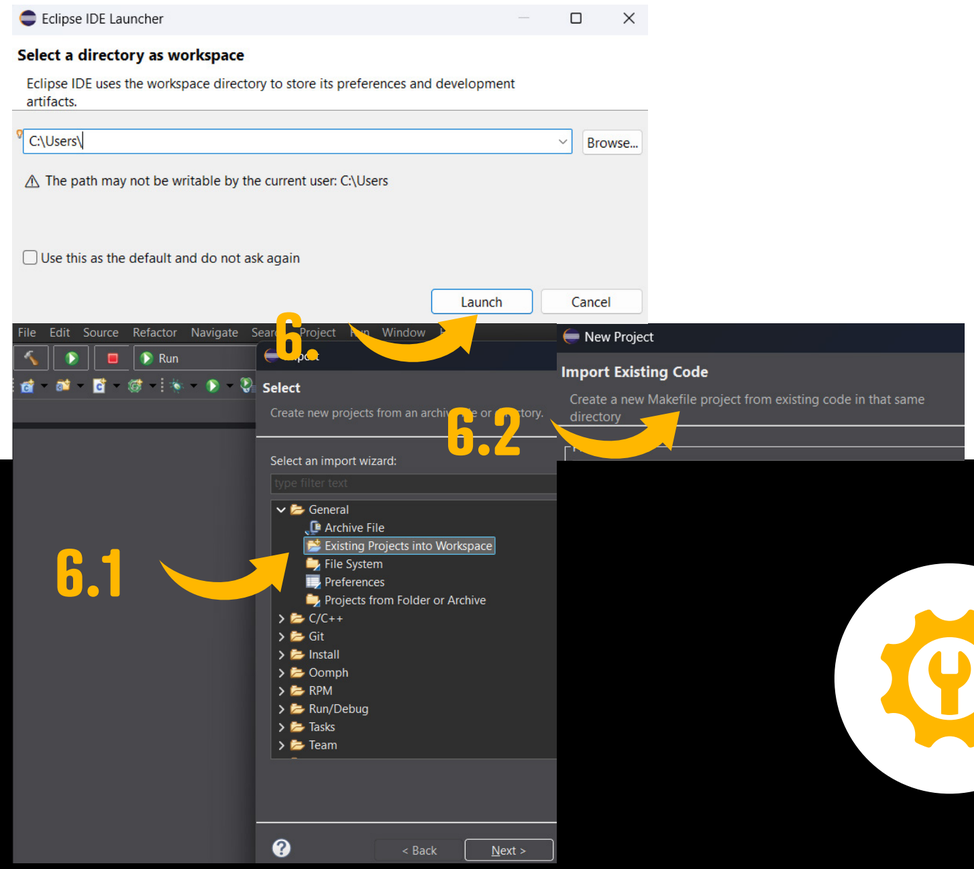
Click "Install".



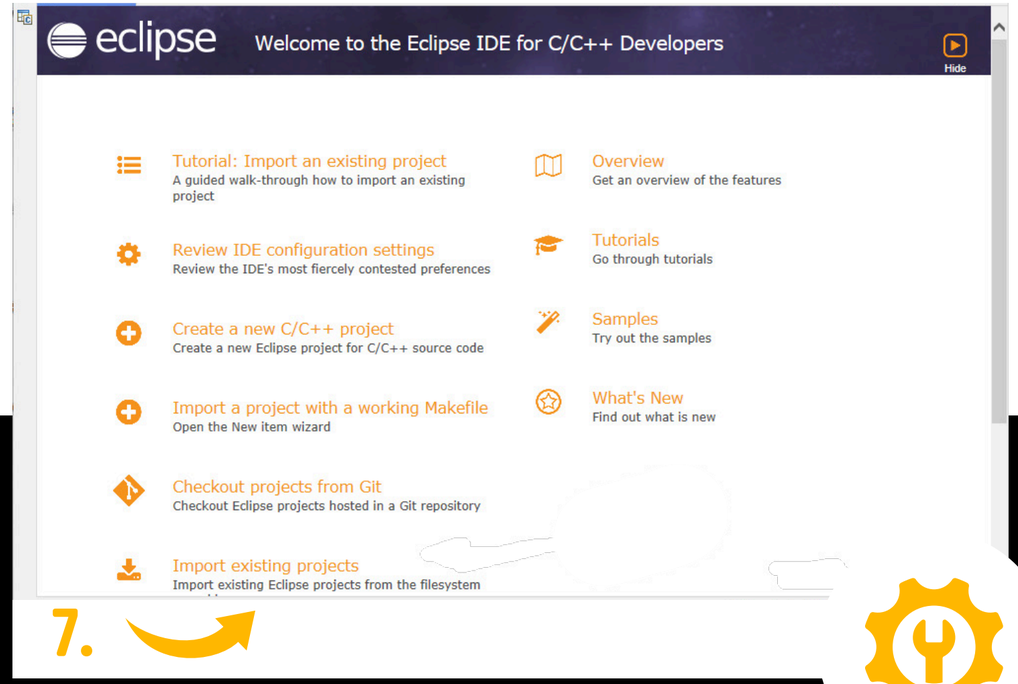
5.

Start Eclipse and set up your workspace once.

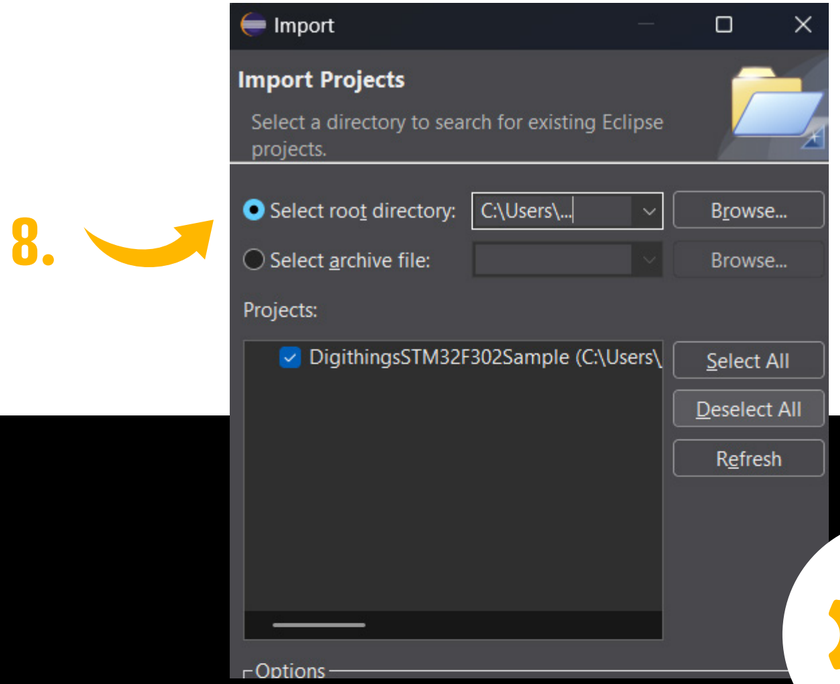
Click ‘Launch’. Then always 6.1 & 6.2 for further projects.



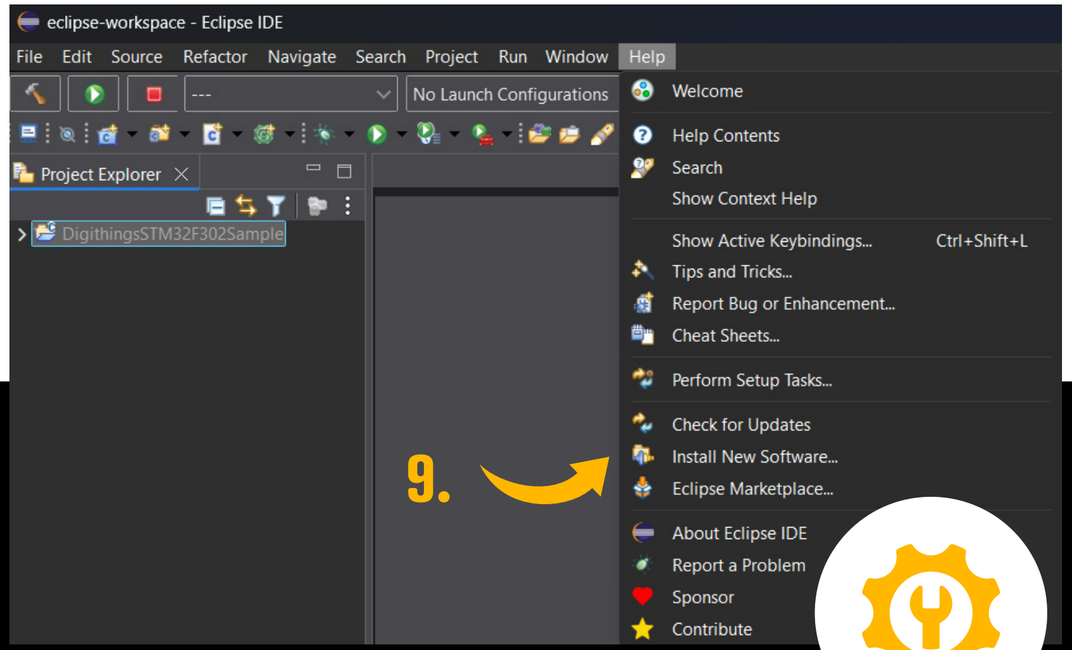
Import "eclipse project".



Select the folder from which the project is to be imported.

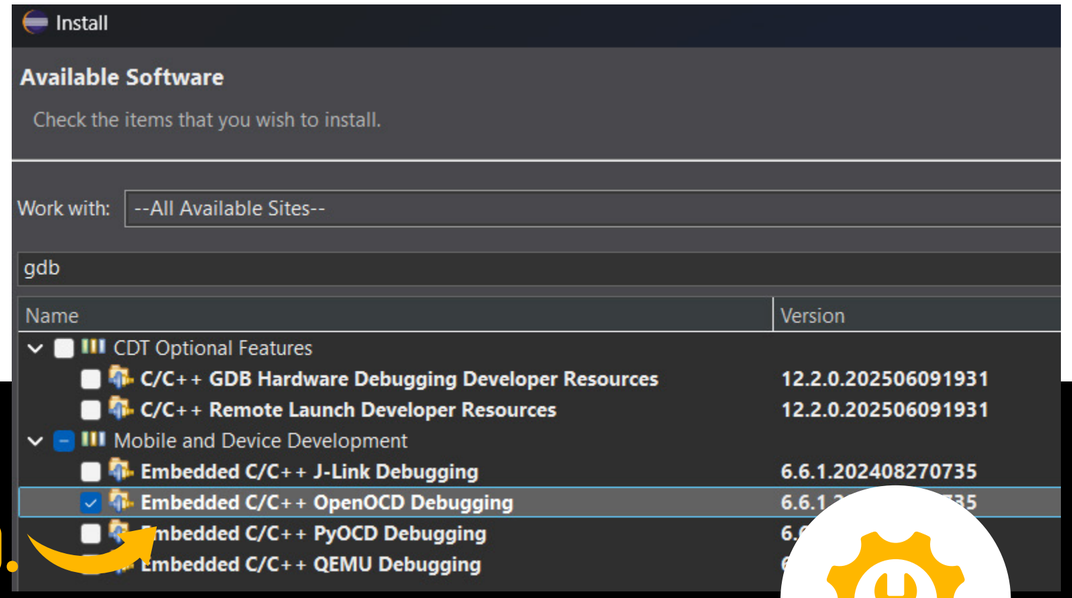


Now just install a plug-in.



Select "Embedded C/C++ OpenOCD Debugging".

Confirm with ‘Next’ and ‘Finish’.



Let's get started...
